ZT Technology Solutions has entered in partnership with Precision Electronic Repair Services.

For the past 5 years, ZT Technologies Solutions has focused its energies in providing remote technical support for legacy telecom product with the objective to extend the life of those legacy telecom systems. Repeatedly, customers have told us that they require total system solutions. This includes repair and engineering services (e.g. redesign of obsolete hardware) focused on legacy products (typically niche and low volume) that are not serviced by the large repair vendors. We have partnered with PrecisionERS (<http://www.precisioners.com/index.php>) of Tampa, Florida to address those specific needs.

We have also created a ZT Multi-Vendor Maintenance (MVM) Solution that will help partner with your Contracting/Procurement organizations with all aspects of life cycle management support of external vendors/products.

ZT will partner with your company to manage OEM vendors as the Single Point of Contact and provide management tools to evaluate their performance relative to contracted SLAs and a cost/benefit analysis.
